Publisher: Digital Leisure Platform: PC Q: What would an "armoured vehicle" be called that is still not an armoured vehicle but has armour anyway? In a work of science fiction, I am writing about a time when the ratio of soldiers to non-combatants is more than 2:1. I am creating a unique term which indicates that the vehicle is at least partially protected against small arms fire. However, the primary purpose of the vehicle is for the transport of other vehicles (e.g., vehicles which would be destroyed by small arms fire). I know that 'truck' is used for vehicles which are not designed to transport other vehicles but are designed to carry other vehicles, but that is not what I am looking for. A: How about "tractor"? It could be used for non-combatants, and although you could refer to it as an armoured vehicle, it doesn't really have to be. Another term I would like to throw out there is "utility vehicle", though this is generally used for larger vehicles. Again, though, you can use it for non-combatants. A "light armoured vehicle" or "light armoured vehicle [with] troop capacity of 2" is not an armoured vehicle in any sense. If the vehicle is a truck it would probably be called a troop transport, but even that doesn't mean it's armoured.
